This module aims to specifically develop your clinical supervision skills and techniques. A clinical supervisor tends to be responsible for the day-to-day supervision, and often assessment, of clinicians in a ‘live’ situation in the workplace. This leads to a number of unique challenges not faced by non-clinical supervisors and this module will give you the tools needed to help support you.

This course will be of interest to GPs and other doctors interested in academic medicine. Additionally, specialist registrars, senior nurses, health visitors, midwives, paramedics and all other health professionals involved in education in the workplace would find this course useful.

Content
The aims of this module are to enable students to critically examine the concept and process of clinical supervision, including supervisory relationship issues, contractual arrangements, and various models of clinical supervision.

Specific Entry Requirements
Entry requirements are normally a first degree in a medical or health discipline and at least 2 years’ experience in a health-related field of work. Applicants with evidence of equivalent professional development or academic proficiency will be considered. International students must demonstrate English Language proficiency to the level of IELTS 6.5 or equivalent.

Dates
Provisional dates for 2015-16 are:
Semester A - 29th & 30th October 2015, 23rd November & 24th November 2015
Semester B - 22nd & 23rd February 2016, 14th & 15th March 2016

Study Route
This module may be studied as a standalone module or as part of a longer academic award such as an MSc, Postgraduate Diploma or Postgraduate Certificate.

Venue
College Lane Campus, University of Hertfordshire, Hatfield.
