**The subject**
The First Year gives you an accessible introduction to economics and a sound base from which to choose your modules.

We begin by looking at the nature and the scope of economic enquiry and then go on to cover the areas of industrial structure, theory of distribution, the market and the environment, the macroeconomic system and international arrangements.

Building on the First Year you will gain an understanding of the major economic issues and challenges facing modern societies. You will also study business economics which applies basic principles to key business problems and organisations. After studying these modules you’ll appreciate in greater depth both national and international models of behaviour and the role of government in resource management as well as how economic principles can usefully inform business decision makers. In addition, the modules show you how economic policy is shaped by such understanding.

In addition there are range of optional modules available, that will be available if you are studying Economics as a Joint or Major.

For the Third Year, you could choose to spend a year working in industry or studying abroad. The University provides plenty of support to help you find the right placement.

The Final Year is a combination of specialist modules including the core module Economics of Business Organisation. Optional modules include Banking, Money and Finance, International Production and Governance, Issues in Global Economy and Anatomy of Financial Crises. The project option is an in-depth study of a topic of your choice relating to your options. In the major mode, you would also take the module, Contemporary Issues in Economics.

**How you learn**
Most modules feature a one-hour lecture followed by a one-hour seminar. Typically, a new topic will be introduced each lecture. The seminars provide a forum to discuss and obtain feedback on the previous week’s topic. In addition, the University’s virtual learning environment, StudyNet, is also used to disseminate information and provides another forum for discussion and debate. Usually, assessment is split between coursework and examination. Coursework takes a variety of forms and could feature individual and group work.

**Your career**
At the end of your studies you’ll be able to apply economic principles to a variety of situations, enabling you to choose between many different careers paths. Many of our graduates have gone on to careers as professional economists and within the general business management and finance fields as well as the public sector.

---

**Study pattern:**
Major, joint or minor

**Location:**
de Havilland Campus

**Study abroad:**
Yes

**Work placement:**
Yes

**Full-time fee:**
£9,000

**Given the nature of the global economy in recent years, this is one of the most fascinating times to study this increasingly important subject. This course looks at the relationships of production and consumption, with particular emphasis on the role economics plays in analysing current problems and informing policy.**
