Tissue Viability Evidence and Application to Practice

7HSK0190 30 credits at Level 7

25, 26 January 2018
15, 16 February 2018
15, 16 March 2018

This module reviews contemporary wound care interventions and treatments and their use in support of advanced tissue viability practice. It explores how such developments can be used to support decision making in clinical practice and how they may impact on tissue viability services in the future.

Content
Module content will be delivered through a combination of classroom-based and online activities. Sessions will be interactive and participative with students being encouraged to share their own expertise and experiences within the group. Individual and group tutorials will be available in person or online.

- A review of contemporary wound care interventions and treatments.
- Methods of debridement inc. surgical, conservative sharp and larvae.
- Compression therapy for a range of conditions.
- Antimicrobial agents.
- Wound diagnostics.
- Key dressing categories.
- Debate of evidence underpinning tissue viability practice.
- Study skills and online literature searching.
- Product research, development and marketing.
- Development of educational resources in support of tissue viability practice.
