Hospital/Trust visited:	Date of visit:

Reflection on the clinical visit

The questions on this form are designed to help you reflect on your clinical visit so that you may use it to inform the content of your personal statement on your application form or think about how you will answer any questions about the visit if you are invited for an interview. Structured reflection on experiences is a common method used to facilitate learning at our university, so it will also help you to begin developing a way of thinking that will be of benefit in your chosen programme of study. A copy of your reflection may also be returned to the admissions department of the chosen universities.

The form is designed to be completed electronically. If you would prefer to print out and hand write your answers, please add some extra blank lines before printing.

1. What patients and types of clinical conditions did you see? How did the radiographer adapt to the variation experienced?
2. What were the enjoyable aspects of your clinical visit?
3. What was the most unusual or surprising aspect of your clinical visit?
4. Did you find any aspect of your clinical visit uninteresting or disturbing?
5. List the 3 most significant things you learned during your clinical visit.
 - a.
 - b.
 - c.
6. What do you perceive to be the role of the radiographer in modern healthcare?
7. Which of your existing personal skills and characteristics will be an advantage when studying and practicing Therapeutic Radiography?
